

BEHLEN

S-Span

The Good Iron People

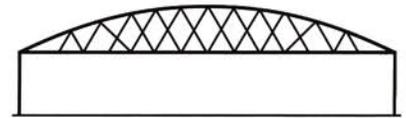

A time honored system

It Begins with the Design

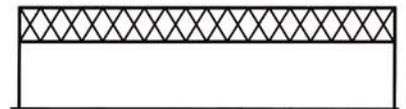

Since the 1950's, the Behlen S-Span design has been a mainstay with many of our builders. The system is perfectly suited for hangars, arenas, exposition centers and other buildings that require large, clear spans. S-Span buildings offer an economical approach to construction and concrete footing design, and can be built on a reasonable budget.

Wide Open Spaces

Construction of a Behlen S-Span building is truly unique. With all of the support strength formed into the corrugated steel wall panels, there are no interior frames to work around. S-Span interiors are uncluttered and attractive. Speakers, lighting and other equipment can be bolted directly to the ceiling. Mechanical equipment and electrical wiring can be hidden from sight. **The energy-efficient design of the roof allows a high R-value to be achieved.**

Convex

Dubl-Panl

Dress it Up

There is almost no limitation in facing materials that can be used on an S-Span building. Choose from standard corrugated steel panels, color coated ADP panels and facades to masonry, wood or even glass. The S-Span system is very versatile.

S-Span

Inherent Strength and Efficiency

- ◆ *Large, clear spans*
- ◆ *100% nut and bolt construction using heavy gauge panels (no screws)*
- ◆ *A tough, proven stressed skin design*
- ◆ *Energy-efficient building with an economical concrete footing design*
- ◆ *High R-Values*
- ◆ *Made with quality in the U.S.A.*

S-Span Roof Applications

Culver, IN

Top it Off

- The perfect roofing answer for pre-cast concrete or masonry wall construction
- Long, clear-span capabilities
- Provides the finished roof as it's installed
- No special fasteners needed, only standard Behlen components
- Conceal wiring, HVAC, piping and insulation between the roof and ceiling
